

ROE MIXER

A complete system solution for mixing roe as gently and efficiently as possible.

**SUSTAINABLE
FISH HANDLING**

ROE MIXER

The MMC FIRST PROCESS Roe Mixer is specially constructed to handle the fragile and valuable herring roe as gently and sensitively as possible – this was a top priority during the design and development phases.

Mixing roe manually is heavy, repetitive work. With a fully automated roe mixer from MMC First Process this manual work is eliminated. Roe Mixer is a complete system with a several programs, depending on the maturity of the roe. Program options provide for different

quantities of water refill, processing times, numbers of cycles and agitator rotation speeds. The machine works with 1,000-litre plastic tubs. To ensure that all the roe is mixed, the plastic tubs are automatically moved to and fro laterally, while two specially designed agitators simultaneously rotate gently in the roe mass.

PROPERTIES

- Customized programs for different conditions
- Safe system solution
- Robust design for forklift

ADVANTAGES

- 20 plastic tubs/hour , depending on program
- Automatic water refill
- Special designed double mixers

VALUE

- More efficient production
- Higher capacity, with fewer manual workers
- Easy to operate
