

SAFE 3000 - PALLETIZER

Fully automated process for transferring cartons of frozen fish from freezing racks down to standard pallets

SAFE 3000 – PALLETIZER

The MMC First Process SAFE3000 Palletizer is a solidly built, high-capacity, electropneumatic palletizing system. No hydraulics are involved, as these can cause spillage problems. The electrical design gives improved operational reliability and lower maintenance costs.

This machine is constructed to operate in rugged environments and its design is very flexible. Various types of conveyors, buffer zones and plastic wrapping systems with fixed or rotating pallets means there is plenty of scope to adapt the system to the customer's

requirements. The layout can be adjusted to fit the customer's building and desired capacity.

The smart, innovative design with high priority given to HSE means that customer personnel find this palletizer machine reliable and easy to operate safely.

PROPERTIES

- Handles different sizes of pallets and freezing racks
- Two shelves can be unloaded simultaneously
- Capacity – 40 to 60 tonnes/hour in optimal operating conditions.

ADVANTAGES

- No manual work
- Fully automatic palletizer system
- Customized solution for buffering and transporting pallets and freezing racks.

VALUE

- Electropneumatic - lower maintenance costs
- Less forklift driving
- Better visual appearance for the plastic wrapped pallets.
