

DIRECT PALLETIZER

Fully automated process for transferring cartons of frozen fish from freezing racks down to standard pallets

DIRECT PALLETIZER

The MMC First Process Direct Palletizer is a solidly-built, high-capacity, electro-pneumatic palletizing system. There are no hydraulics, with associated spillage risks. The electrical design gives increased operational reliability and lower maintenance costs.

This machine is designed to operate in rugged environments and the design is very flexible. It is easily tailored to customer requirements, with a wide range of types of conveyors, buffer zones, plastic wrapping systems with fixed or rotating pallets etc. on offer. The layout can be adapted to fit the customer's building and the desired capacity.

The smart, innovative design, high level of reliability and close attention paid to HSE makes the palletizer an easy machine for the customer's personnel to operate safely.

PROPERTIES

- Handles different sizes of pallets and freezing racks
- All shelves can be unloaded simultaneously
- Capacity - 100 tonnes/hour in optimal operating conditions.

ADVANTAGES

- No manual work
- Fully automated palletizer system
- Customized solution for buffer, transport of pallets and freezing racks.

VALUE

- Fully electrical and pneumatic - lower maintenance costs
- Reduced fork-lift requirement.
- Improved appearance of the plastic wrapped pallets.
