

PALLET ORGANIZER

Pallet Organizer is a fully automated module-based solution for reorganizing the pallet stacks

**SUSTAINABLE
FISH HANDLING**

PALLET ORGANIZER

When stacks of pallets arrive at the factory, the pallets are stacked with every second one upside down, in order to save space during transport. The pallets must therefore be re-organized and re-stacked, before they can be used in a seafood production line.

The Pallet Organizer is a fully automated machine, which replaces the heavy manual work involved in this task.

This high capacity machine turns the pallets the right way up and stacks the pallets to the desired height. The Pallet Organizer consists of two main parts: 1x pallet organizer and 1x pallet stacker. Either may be used as a stand-alone machine, or Pallet Organizer can replace standard pallet magazines in existing palletizer systems. Heavy manual work is eliminated.

PROPERTIES

- Compact and Space efficient solution.
- High Capacity – 120 pallets/hour.
- Heavy design for rugged environments.

ADVANTAGES

- Better logistics workflow.
- High flexibility solution.
- Easy access for service and maintenance.

VALUE

- Less repetitive work and fewer strain injuries.
- Removes heavy manual work.
- Reliable and stable automatic machine.
